## 0. INTRODUCTION

This User Manual has been developed by the SMDG User Group for Shipping Lines and Container Terminals, a “Global User Group” under the auspices of UN/CEFACT.

This User Manual is based upon the UN/EDIFACT D.00B directory and the ITIGG documents “International Reference Guideline for the implementation of transport EDI messages – CODECO Gate Activity Message”, version 1.4, dated March 1998 and “Principles and Rules for the implementation of transport EDI messages – Transport Equipment Movements – Maritime-related container messages”, version 1.3.1, dated September 1996.

This User Manual provides guidance as to the recommended usage of codes, qualifiers, data elements, composites, segments and groups of segments in the D.00B CODECO message. The intention is to assist developers to ensure consistent use of the CODECO message throughout the worldwide trade and transport community.

## 1. GENERAL

### Formal Definition

*“A message by which a terminal, depot, etc. confirms that the containers specified have been delivered or picked up by the inland carrier (road, rail or barge). This message can also be used to report internal terminal container movements (excluding loading and discharging the vessel). This message is part of a total set of container-related messages. These messages serve to facilitate the intermodal handling of containers by streamlining the information exchange. The business scenario for the container messages is clarified in a separate document, called “Guide to the scenario of EDIFACT container messages”.*

The CODECO message is intended for the reporting of gate activity (gate movements) associated with an item of equipment in and out of a container terminal, storage and repair facility, or packing/unpacking facility.

It can also be used to report movements within the facility, including changes to the status of the item of equipment after servicing or repair.

The container leasing industry will also use it for notification of changes to the lease status of a container - ie. as a report of on/off hire or direct interchange.

The message is intended for the provision of operational reports, which may be used for the updating of equipment tracking systems.

## 2. STATUS INDICATORS AND USAGE INDICATORS

### Status Indicators

Status Indicators (“M” and “C”) form part of the UN/EDIFACT standard and indicate a minimum requirement to fulfil the needs of the message structure. They are not adequate for implementation purposes. The Status Indicators are :

<i>Value</i>	<i>Description</i>
M	Mandatory The entity marked as such must appear in all messages, and apply to these messages as well as to any associated implementation guidelines (and consequently is also a Usage Indicator).
C	Conditional The entity is used by agreement between trading partners.

### Usage Indicators

Usage Indicators are implementation–related indicators that further detail the use of “Conditional” Status Indicators. Usage Indicators are applied at all levels of the guidelines and shown adjacent to data items such as segment groups, segments, composite data elements and simple data elements. They dictate the agreed usage of the data items or entities. The Usage Indicators are :

<i>Value</i>	<i>Description</i>
M	Mandatory Indicates the item is mandatory in the UN/EDIFACT message.
R	Required Indicates the item must be transmitted in this implementation.
D	Dependent Indicates that the use of the item is depending on a well-defined condition or set of conditions. These conditions must be clearly specified in the relevant implementation guideline.
O	Optional Indicates that this item is at the need or discretion of both trading partners.
X	Not Used Indicates that this item is not to be used in this implementation.

Where an item within a segment group, segment or composite data element is marked with Usage Indicators “M” or “R”, but the segment group, segment or composite data element has been marked “O” or “D” (or for that matter “X”), the item is only to be transmitted when the segment group, segment or composite of which it is a part, is used.

---

### 3. DOCUMENT MAINTENANCE

The data content of this document has been prepared and approved by SMDG and no alteration may be made to the content of this document without reference to and approval of SMDG.

## 4. VERSIONS

SMDG21.

Version 2.1, first released October 2015, includes amendments for transmission of data specifying a container's verified gross mass (VGM) according to SOLAS regulation 2, chapter VI, paragraphs 4 to 6.

With a short deadline (July 2016) it was decided to do minimum changes - what was considered as an absolute (legal) minimum - to limit the impact on EDI and backend systems of different organizations. It was decided to make additions in the current version without structure changes via existing segments and data elements. Only necessary new qualifier and/or codes will be requested via DMR.

To handle the new SOLAS requirements on Gross Mass Verification, DMR (Data Maintenance Request) for new codes, to handle the new entities, will be submitted to UN/CEFACT.

The acceptance of these DMR's are available as from version D.15B The Message Implementation Guides can use 'Temporary' codes indicated between square brackets [xxx] and codes only available in a later version.

Changes for SOLAS in this manual: (codes used as available from UN/EDIFACT version D.15B or current directory.)

### **EQD group segments additions:**

MEA – Measurements

**VGM** – Verified Gross Mass (weight)

NAD – Name and Address

**AM** – Authorized official – person signing for Verified Gross Mass

**SPC** – SOLAS Packed Container Verified Gross Mass Responsible party

DTM – Date/Time

**798** - Verified gross mass determination date/time - Date/Time when a gross mass (weight) of a packed container was obtained according to SOLAS chapter VI, regulation 2, paragraphs 4-6

FTX – Free text (ABS) container condition – SMDG maintained codes

**SM1** – SOLAS Method 1 – Verified Gross Mass obtained by weighing

**SM2** – SOLAS Method 2 – Verified Gross Mass obtained by calculation

RFF – References

**VGR** – Verified Gross Mass Reference – link to VGM information

**VOR** – Verified Gross Mass Order Reference – response to instruction for VGM ascertainment

---

Additional In case of reporting of Terminal/Depot or Weighing Facility weighing:

**Header**

NAD – Name and Address

**WPA** – Weighing party - Party designated (legally accepted) to ascertain the weight

CTA – Contact

**BN** – Certification Contact - Department/Person responsible for obtaining a Transport equipment verified gross mass (weight) (in case of BN)

**Segment:** UNH Message Header

**Position:** 0010

**Group:**

**Level:** 0

**Usage:** Mandatory

**Max Use:** 1

**Purpose:** A service segment starting and uniquely identifying a message. The message type code for the Container gate-in/gate-out report message is CODECO.  
 Note: Container gate-in/gate-out report messages conforming to this document must contain the following data in segment UNH, composite S009:  
 Data element 0065 CODECO 0052 D 0054 00B 0051 UN

**Comments:**

**Notes:** *Sample segment :*  
**UNH+241443010001+CODECO:D:00B:UN:SMDG21'**

**Data Element Summary**

	<u>Data Element</u>	<u>Component Element</u>	<u>Name</u>	<u>Attributes</u>
M	0062		MESSAGE REFERENCE NUMBER <i>Unique message reference assigned by the sender. This reference must also be transmitted in the UNT segment.</i>	M 1 an..14

**- REEFER SETTINGS (if e4451 = OSI):**

**CLS** Vents closed  
**QUA** Vents one quarter open  
**HLF** Vents half open  
**THR** Vents three quarters open  
**FLL** Vents fully open  
**025** Volume of air flow 25 cubic meters per hour  
 etc.

**- INDICATION OF CONSTRUCTION MATERIAL (if e4451 = ACF):**

**Construction material code as per ISO 9897**

- INDICATION OF DAMAGE CONDITION (if e4451 = DAR):

Condition code (see JM4/ITIGG/120)

- CURRENT EQUIPMENT CONDITION (if e4451 = ABS):

Condition code (see JM4/ITIGG/120)

For non-running reefer (dry reefer), the correct mechanism as per JM4/272 is as follows :

- e4451 = ABS
- C107.e4441 = 117 (no temperature setting required)
- C107.e1131 = ZZZ (mutually defined)
- C107.e3055 = 184 (ACOS)

Condition code (see JM4/ITIGG/120v1.7)

- e4451 = ABS
- C107.e4441 = SM1 (Gross Mass Verification – SOLAS Method 1) Gross Mass Verification by weighing the packed container as per SOLAS Regulation 2 Chapter VI, paragraphs 4-6, method 1
- = SM2 (Gross Mass Verification – SOLAS Method 2) Gross Mass Verification by calculation of weight of goods transported, packing weight, lashing and securing material weight and container tare weight as per SOLAS Regulation 2, Chapter VI paragraphs 4-6, method 2
- C107.e1131 = ZZZ
- C107.e3055 = SMD (SMDG)

- INVOICE INSTRUCTION (if e4451 = INV):

Instruction code (see JM4/ITIGG/120)

- SPECIAL INSTRUCTION (if e4451 = SIN):

Instruction code (mutually agreed)

### 8.3 CODECO reporting Gate In message with verified gross mass (weight) obtained at Gate In by weighing.

Container was weighed at Gate In to ascertain Transport equipment verified gross mass (weight).

This weighing action to obtain this verified weight was a result of:

- A standing order negotiated/agreed by the Shipping line with the terminal
- A specific separate weighing order received by the terminal to weigh this specific container send by a customer (in general the operating Shipping line)

#### 8.4 CODECO reporting Transport equipment (TE) gross weight verification by terminal (~VERMAS)

Container arrived at the gate without a Transport equipment verified gross weight and was stacked in the yard as such.

Container was weighed at the terminal to obtain the Transport equipment verified gross weight.

The weighing action to obtain this verified weight was a result of:

- A specific separate weighing order received by the terminal to weigh this specific container send by a customer (in general the operating Shipping line)
- A weight verification handling instruction (HAN) included in the Container Loading order (COPRAR)
- By IMO guidelines regarding SOLAS implementation rule 13.1 to allow the continued efficient onward movement as agreed by the terminal with the commercial party (shipping line)

No 'Authorized person' (individual who represents Shipper, Freight Forwarder, Consolidator, NVOCC, ... and signs for the Verified gross mass (weight)) present, as terminal/weighing facility only obtains the weight, and does not sign for it.

## 8.5 CODECO reporting Transport equipment gross mass (weight) verification by weighing facility (~VERMAS)

Container was send to a weighing facility to ascertain the Transport equipment verified gross mass (weight).

The weighing facility sends the necessary information back to the ordering customer - the shipper or freight forwarder.

The recipient (Shipper / Freight Forwarder) will document this information, an Authorized person will sign it and send the necessary information to comply to the new SOLAS requirements (Verified Gross Mass and Authorized person) to the Shipping line.

The message can be a response to a specific Weighing order/instruction and can than specify the ' TE Gross Mass (Weight) Verification Order' which was previously send in a COHAOR.
