

Verified Gross Mass

Discussions SMDG Meeting
1. April 2015 - Malmö

SMDG and VGM

- Provide discussion platform
- Adapt EDI messaging framework
 - Amend existing messages
 - Provide for new message(s) (if necessary)
 - Official Edifact framework
- **Recommendation** for usage of EDI messages (intention: avoid individual solutions)
 - Use cases (which message for which purpose)
 - Usage of segments, data elements, codes

Timing ...

**IT implementation to be specified until
30. June 2015**

What is feasible?

Potential approach (1)

- Amendment of existing messages for additional information
 - Use of segments already provided in message (MEA, RFF, NAD, ...)
 - Add new qualifiers / codes
 - No change of message structure
i.e. **no additional segments or groups**
otherwise message becomes subject of new directory

Potential approach (2)

- New message **VERMAS**
reasonably stable draft not before end 2015

Potential approach (3)

Consequence for VGM going into operation in **July 2016**:

- EDI support for *many* business cases **available**
- EDI support for *some* business cases **delayed**

Until June 2015:

- Identify business cases of both kind
- Prepare business organization internal, bi-lateral agreements

Identification of messages and amdmts:

Message	Addl. Information
BAPLIE 2.0, 2.1, 3.0, 4.5	VGM qualifier D1, Verifiication ref O D1=M in case of final
