Container Messages

Container Messages 18/04/2023 11:30 – 12:30	**Paul WAUTERS** starts his presentation with a review of the work in progress on COXXXX container messages, explaining the challenges, especially based on clients' individual requests. He next introduces the new guidelines D.22B, updating current guidelines to latest SMDG recommendations. Paul then provides some highlights about some current items already added, also about new idees, regarding transhipment for instance, change of terminals (triggering audience questions from terminals – HHLA). He has a few additional words about COPARN updates, COPRAR updates and LOC qualifiers. Before to give the mic to Robert, a few minutes are dedicated to the Q&A and priorities of the audience. Multiple question, for instance from HHLA about the potential links between the data stream framework presented a few minutes ago and with the update of COPRAR. Debate takes place around the table with **Steven YATES**. **Robert ROESTENBURG** takes the lead. He quickly introduces the new container messages implementation, with a presentation of the documentation available provided by SMDG, answering a few questions from the audience about it.		**Paul WAUTERS** *SMDG* & **Robert ROESTENBURG** *RWG*
