

Maersk Data Streaming Use Cases

SMDG#77 Minutes

<p>Maersk Data Streaming Use Cases Presentation 18/04/2023 11:15 – 11:30</p>	<p>Presentation by Thor BAUNSGAARD from Maersk of some use cases for data event streaming. Indeed, Maersk has started event streaming a couple of years ago, for some specific elements.</p> <p>Thor has proceeded first with a recall of some useful and important notions, such as event definition, message composition and retention settings. These details were useful and complementary to the previous presentation by Steven YATES.</p> <p>He details a few practical cases such as initial load, push with API cases, recovery examples.</p> <p>Audience has multiple questions, both from terminals and carriers, regarding especially the retention of data, about for instance the legal limitation or obligation for data conservation. Thor provides some details and answers to these very interesting questions.</p>		<p>Thor BAUNSGAARD <i>Maersk</i></p>
